Improving the nutritional value of phytate-containing foodstuffs, using phytase enzymes which catalyze the liberation of inorganic phosphate from the phytates.

Claim 2; Fig 1; 147pp; English.

The present sequence encodes a phytase enzyme from Escherichia coli B. The enzyme catalyses the liberation of inorganic phosphate from the phytate on phytate-containing foodstuffs and can thus be used to improve the nutritional value of phytate rich ingredients

TTTATTGCCGGACACGATACTAATCTGGCAAATCTCGGCGGCGCACTGGAGCTCAACTGG

The present invention relates to novel dietary aids comprising sustained release biocompatible composition which comprises an agent (enzymes such as phytase, amylase, esterase, protesse) that assists in digestion. The biocompatible composition is effective upon oral consumption and release in the digestive tract of a subject. The dietary aids are useful for delivering enzymes, therapeutics, medicine and agents to an organism. The

The patent discloses recombinant bacterial phytase from Escherichia coli CC K12 appA phytase. The enzyme has phytase activity and improved thermal CC tolerance when compared with wild-type phytase. It has improved protease CC stability at low pH. The recombinant phytase is useful for improving the CC improving the growth performance of an organism that consumes it, in CC treating animal digestive systems, in feed treatment processes and for in CC vitro purposes related to research, discovery and development. They are CC also used for generating recombinant digestive systems for CC the use of moulds, grains and/or plants, in biopulping and bio-bleaching CC where a reduction in the use of environmentally harmful chemicals that CC are traditionally used in the pulp and paper industry is desired and in CC thus increasing the amount calories and nutrients present in the feed. The present sequence is a DNA encoding E. coli B phytase protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 100.

```
The invention relates to an isolated Bscherichia coli polynucleotide encoding a phytase enzyme appearing as ADA19450 and having amino acids condition from W68B, Q84W, A95P, X97C, $188E, R180Y, N226C or Y277D. CC Also included the E. coli appA gene ADA1945 (or an oligomucleotide derived from it) or its mutant sequence ADA1945, expression vectors, containing foodstuff by contacting nutritional value of a phytate-cc containing foodstuff by contacting the phytate-containing foodstuff with a pure phytase enzyme mutated phytase (where the phytase enzyme catalyzes the liberation of inorganic phosphate from the phytase in the phytate containing a microbial phytase (comprising culturing the plant cell, plant part or containing a foodstuff), a method to produce an animal feed containing a feed composition where the nucleotide sequence is expressed and containing the plant cells, plants or plant into a composition for animal feed), a feed composition for animals (comprising the plant seeds, plant cells, plant parts or plants in admixture with a phytate-containing comprising administering to the human or an animal able to benefit from comprising administering to the human or animal the plant seeds, plant cells, plant parts or plants of a transgenic plant which is modified to contain an expression system which expresses a nucleotide sequence containing a phytase enzyme, a transgenic non-human organism whose genome containing a phytase enzyme, a transgenic non-human organism whose genome containing phytase activity. The phytate enzyme is useful for improving the nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The containing the plant end of phytate rich ingredients. The present end of the produce and protease stability. It can be added to the phytate rich ingredients. The present end of the produce of the phytate rich ingredients. The present containing the phytase.
                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      맑
The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            13-AUG-1997;

The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present sequence is Escherichia coli B phytase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         coli B phytase. The present invention relates to a movel formulation, comprising at least one polypeptide having phytase activity, where the polypeptide is a modified sequence (ABE75421) derived from the Escherichia coli K-12 appA phytase (ABE75421). The modification of the Escherichia coli K-12 appA phytase (ABE75419). The modification of the enzyme, comprising a series of mutations, improves the thermal tolerance and procease stability of the protein. The specification also claims a pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive; a liquid supplement for preventing muscle cramps; a chydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising the novel phytase, and a method of reducing pollution and increasing nutrient availability in an environment or environmental sample by degrading environmental phytic acid. The novel cargme is a dietary supplement useful for treating, preventing reversing osteoporosis or bone loss, and preventing muscle cramps. The liquid supplement is useful for preventing muscle cramps. The method is useful for reducing pollution and increasing nutrient availability in an environment or environment or any increasing phytic caid, where the environmental sample by degrading environmental phytic acid, where the environment or environmental in foodstuffs for improving the feeding value of phytase is useful in foodstuffs for

The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expression the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease ct improve the feeding value of phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytate rich ingredients, and in diet of CC improve the feeding value as pigs, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as chicken, ducks, doves, parrot, etc., CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25-MAY-1999;

```
The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC etc., in dough making and baking, in dietary aids for animals. The method CC provides easy manufacture of the active ingredient loaded biocompatible CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Scherichia coli W phytase mutant DNA. Note: The present CC scherichia coli B phytase DNA ADO50291.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The enzyme has phytase activity and improved thermal CC tolerance when compared with wild-type phytase. It has improved protease CC stability at low pH. The recombinant phytase is useful for improving the growth performance of an organism that consumes it, in CC improving the growth performance of an organism that consumes it, in CC treating animal digestive systems, in feed treatment processes and for in CC vitro purposes related to research, discovery and development. They are CC also used for generating recombinant digestive system life forms, for CC producing or manufacturing alcoholic and non-alcoholic drinks based on CC the use of moulds, grains and/or plants, in biopulping and bio-bleaching CC where a reduction in the use of environmentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in CC the reduction or possible elimination of the need for mineral CC supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. CC The present sequence is a DNA encoding E. coli appA phytase wild type

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
The invention relates to an isolated Escherichia coli polynucleotide encoding a phytase enzyme appearing as DAA19450 and having amino acids modification from W68E, Q84M, A95E, K97C, S168E, R18DY, NZ2GC or Y277D. Also included the E. coli apph gene ADA19449 (or an oligonucleotide derived from it) or its mutant sequence ADA19452, expression vectors, lost cells, a method of improving nutritional value of a phytate-containing foodstuff by contacting the phytate-containing foodstuff with a pure phytase enzyme mutated phytase (where the phytate in the phytate containing foodstuff), a method to produce an animal feed containing a microbial phytase (comprising culturing the plant cell, plant part or plant under conditions where the nucleotide sequence is expressed and converting the plant cells, plants or plant into a composition for animal feed; a feed composition for animals (comprising the plant seeds, plant cells, plant parts or plant into a composition for plant seeds, plant cells, plants or plant at the plant seeds, plant cells, plant parts or plant into a composition for animals comprising the plant seeds, plant cells, plant parts or plant into a composition for animals comprising the plant seeds, plant cells, plant parts or plant into a composition for animals comprising the plant seeds, plant cells, plant parts or plant parts or plant into a composition for animals comprising the plant seeds, plant cells, plant parts or plant into a composition for animals comprising the plant seeds, plant cells, plant parts or plant into a composition for animals comprising the plant seeds, plant cells, plant parts or plant into a composition for animals comprising the plant seeds, plant cells, plant parts or plant into a composition for animals comprising the plant seeds and cells, plant parts or plant into a composition for animals comprising the plant cells, plant parts or plant into a composition for animals comprising the plant cells, plant parts or plant into a composition for animals comprise cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13-AUG-1997;

foodstuff), a method to treat a human or an animal able to benefit from digestive enhancement by the activity of an exogenous phytase enzymes comprising administering to the human or animal the plant seed, plant cells, plant parts or plants of a transgenic plant which is modified to contain an expression system which expresses a nucleotide sequence encoding a phytase enzyme, a transgenic non-human organism whose genome comprising a heterologous nucleic acid sequence encoding a polypeptide having phytase activity. The phytate enzyme is useful for improving the nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence represents the E. coli K12 appA gene encoding wild-type phytase.

New nucleic acid encoding a polypeptide having phytase activity, useful in improving the feeding value of phytate rich ingredients or as an aid in phytate digestion.

Example 1; SEQ ID NO 3; 113pp; English.

The invention discloses a new isolated or recombinant nucleic acid which CC encodes a polypeptide having a phytase activity. Also claimed is a cc nucleic acid grobe, an amplification primer sequence pair, an expression CC cassette comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the cc nucleic acid, an artisense oligonucleotide, inhibiting the translation of CC acid, a bybridoma comprising immobilised polypeptide and CC a second domain, an array comprising immobilised polypeptide or nucleic acid, a hybridoma comprising an antibody that specifically binds to the CC polypeptide, a food supplement for an animal, an edible carrier and the CC polypeptide, a feed composition, a soybean meal, isolating or identifying the polypeptide, making an anti-phytase antibody, producing a recombinant CC polypeptide, determining whether a compound binds to the polypeptide, determining whether a compound binds to the polypeptide, cell entifying of new or modified CC phenotypes by using real-time metabolic flux analysis, increasing CC thermotolerance or thermostability of the phytase polypeptide, increasing the resistance of the phytase polypeptide to enzymatic inactivation in a CC digestive system and processing of corn and sorghum kernels. The phytase catalysis of phytate (myo-inositol-hexaphosphate) to inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in improving the feeding value of phytate rich ingredients or CC as an aid in phytate digestion. The sequence presented is the DNA CC encoding the Escherichia coli appa phytase.

Sequence 1901 BP; 474 A; 499 C; 499 G; 428 T; 0 U; 1 Other;

                                                                                                                            The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to cimprove the feeding value of phytate rich ingredients, and in diet of cumerous animals including mammals, fowls and fishes, commercially csignificant mammals such as pigs, goats, laboratory rodents, commercially csignificant avian species such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially fetc., in dough making and baking, in dietary aids for animals. The method composition, higher yields and loading efficiency. The phytase cc incorporated in to the dietary aid is safe for animals. The present of sequence is Escherichia coli K12 appA phytase DNA.

The present invention relates to a recombinant phytase (EC 3.1.2.8) protein and its encoding also nucleic acid molecule. Phytases of the invention is a thermostable protein. They are useful in foodstuffs, f oil degumming, producing an animal feed, delivering a phytase enzyme supplement to an animal, increasing the resistance of a phytase polypeptide to enzymatic inactivation in a digestive system of an animal and in processing of corn and sorghum kernels. The invention is also

of an animal

The present sequence is a Escherichia coli phytase appA gene. Note: The description specified in the specification for the SEQ ID No:3 is E. coli phytase appA gene. However the description specified in the accession number M58708 is E. coli periplasmic phosphoanhydride phosphohydrolase (appA) gene. Thus the description given in the specification varies with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of a polynucleotide encoding the Escherichia CC coli phytase appA, which was modified to produce a thermostable protease CC resistant phytase which constitutes the novel enzyme of the invention. CC The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity, where the polypeptide is a CC modified sequence (AES'5421) derived from the Escherichia coli K-12 appA CC phytase (AES'5421). The modification of the enzyme, comprising a series of mutations, improves the thermal tolerance and protease stability of CC the protein. The specification also claims a pharmaceutical composition, a kit; an immobilized phytase; a fertilizer or soil additive; a liquid CC supplement for preventing muscle cramps; a hydrating agent; a tissue CC culture or cell culture media; and a plant food additive, all comprising the novel phytase, and a method of reducing pollution and increasing complement availability in an environment or environmental sample by degrading environmental phytic acid. The novel enzyme is a dietary CC supplement useful for treating, preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The liquid supplement is useful CC environmental sample comprises a soil or a body of water. The immobilized converse of hytase is seful in foodstuffs for improving the feeding value of CC phytase is useful in foodstuffs for improving the feeding value of converse rich increasing the feeding to a solution of the converse of the protein converse of the prote
